

Lab 2A – Configuring Users

Lab submission

Your lab submission should contain the following two files:

File 1:

1. Create a document called **Lab2A_firstname_lastname**, where *firstname* is your first name and *lastname* is your last name.
2. Put your full name at the top of the document.
3. Take screen captures (Use the Windows Snipping Tool) as requested in red text with the tag **<<SS##>>**, label each screen capture with the entire tag and description in red.
4. If any questions are asked, they will be labelled as **<<Q##>>** in red text as well, insert the question tag and answer into your document in order.
5. When finished submit the document, which only contains the labelled screenshots, as a **.pdf** to **Assessments>Dropbox>Lab 2A** prior to the posted due date.

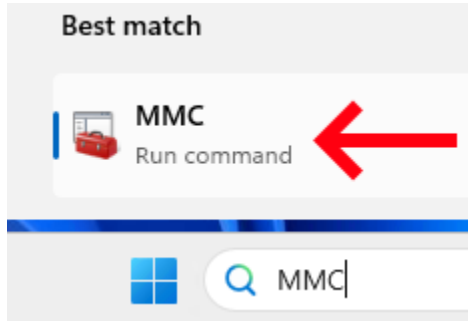

File 2:

1. Make sure each screen shot is saved as SS##, where the octothorps are the appropriate number.
2. Zip all the pictures into one file and submit to the Brightspace Dropbox.
3. Note: These pictures contain metadata which can be used for verification if any questions arise regarding academic misconduct.

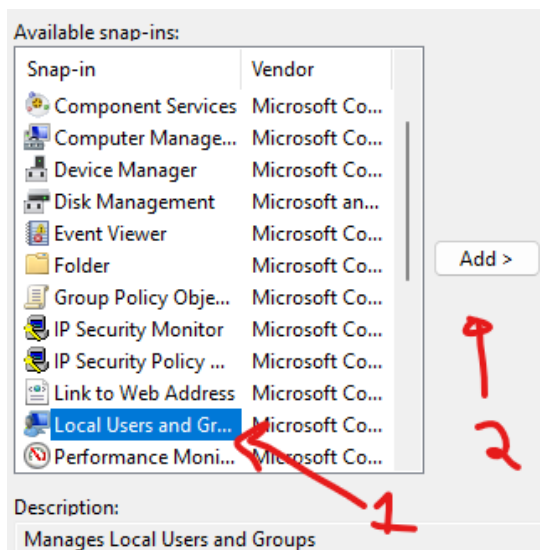

A. Creating managing local users

Access the user management console

1. Log into your Windows 11 VM we created last lab.
2. Type **MMC** into the search bar and click the MMC console. Alternatively right click the windows logo and select run, type in **MMC** and run.

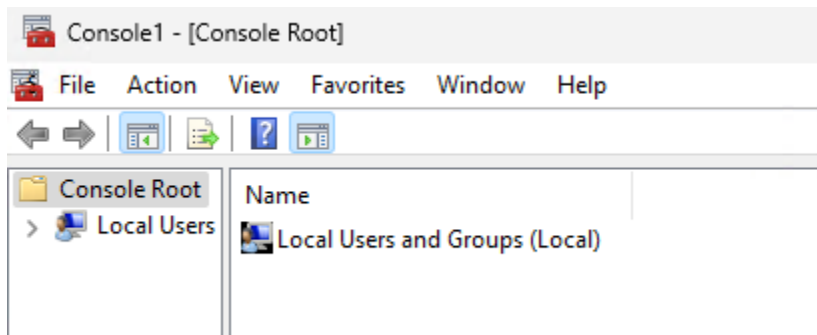

3. Select Yes when prompted by user account control.
4. Add the users by selecting *File->Add/Remove Snap-in...*
5. Scroll to find **Local Users and Groups**, select *Add >*.

6. A pop up will appear, select **Local Computer** and then *Finish*.
7. Select OK.

The local users and groups controls will now be available in the console.

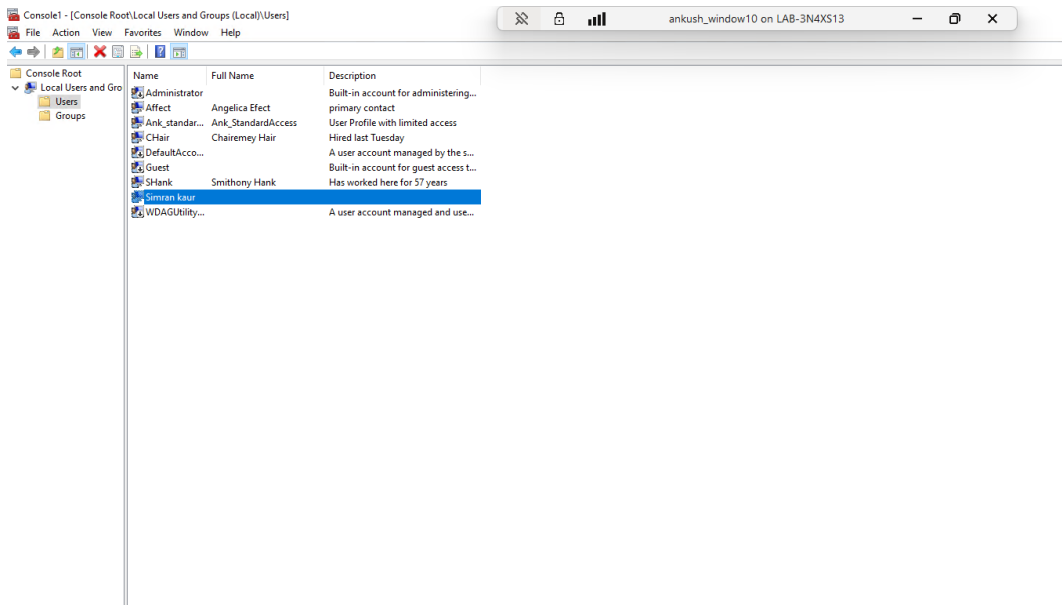

Create a new user

1. Double Click the Local Users and Groups object in the MMC.
2. Double click the Users Folder.
3. On the right hand side, select More Actions->New User...
4. A context menu will open to generate a new user.
5. Create a new user with the following parameters (replace FirstName LastName with your first and last names):
 - a. User name: **FirstInitial_LastInitial_StandardAccess**
 - b. Full name: **FirstName_LastName_StandardAccess**
 - c. Description: **User profile with limited access**
 - d. Password: **C00s!sFun**
 - e. **Uncheck** Change password at next login.
6. Create a second user with the following parameters:
 - a. User name: **SHank**
 - b. Full name: **Smithony Hank**
 - c. Description: **Has worked here for 57 years**
 - d. Password: **Summer12!**
 - e. **Uncheck** Change password at next login
7. Create a third user with the following parameters
 - a. User name: **CHair**
 - b. Full name: **Chairemey Hair**
 - c. Description: **Hired last Tuesday**
 - d. Password: **TempPa\$\$1**
 - e. **Check** the change password at log-in

8. Create a fourth user with the following parameters

- a. User name: **AFfect**
- b. Full name: **Angelica Ffect**
- c. Description: **Primary contact**
- d. Password: **TempPa\$\$1**
- e. **Check** the change password at log-in

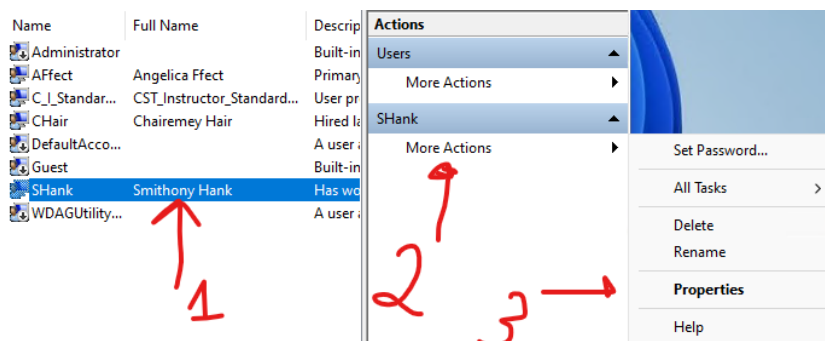

<<SS01>> Take a screenshot of the completed Users, make sure the name and full name are visible.

Disable a user

Oh no! Smithony just retired and we need to disable his account.

1. Select SHank->More Actions->Properties

2. Check Account is disabled and click okay.

The user account picture on the far left added a down arrow to show that the account is disabled.

Delete a user

Oh no! Charemey just quit and we need to delete his account.

1. Select *Chair*->*More Actions*->*Delete*.
2. Select Yes in the pop up box.

Rename a user

Oh no! We miss spelled Angelica's name, it should be Enjelickah.

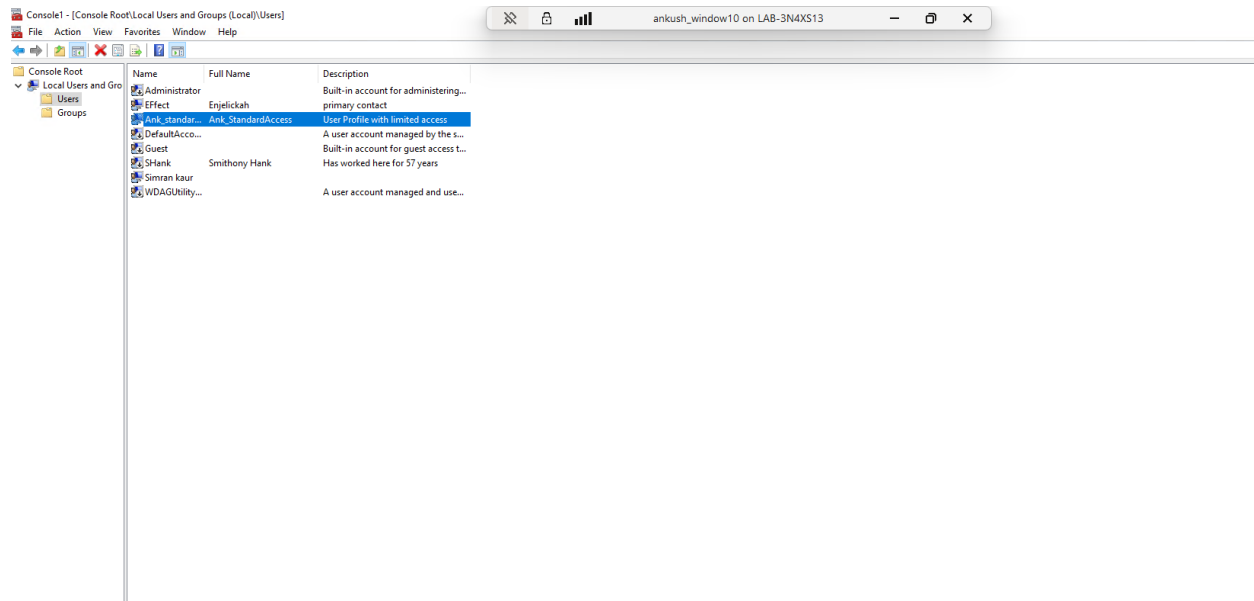

1. Select *AFfect*->*More Actions*->*Properties*
2. Change the full name to the correct spelling, **Enjelickah**, and select OK when done.
3. Select *AFfect* ->*More Actions*->*Rename*
4. Change the user name from *AFfect* to **EFfect**.

Changing a user's password

Oh no! The entire class knows your password for the user account you made.

1. Select *FirstInitial_LastInitial_StandardAccess*->*More Actions*->*Set Password...*
2. Select *Proceed*.
3. Enter a new password of your choice. Try not to forget. Then select OK.

<<SS02>> Take a screenshot of the Users, make sure the names are visible.

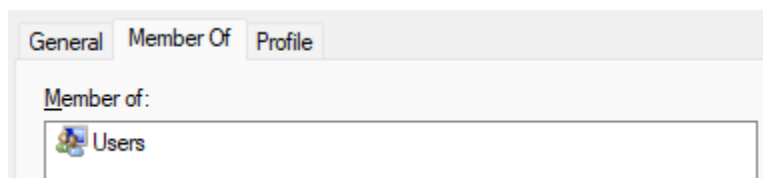

B. Managing groups

Add a user to a group

A user can be added to a group to control access to different services, this is a common practice in most computer services.

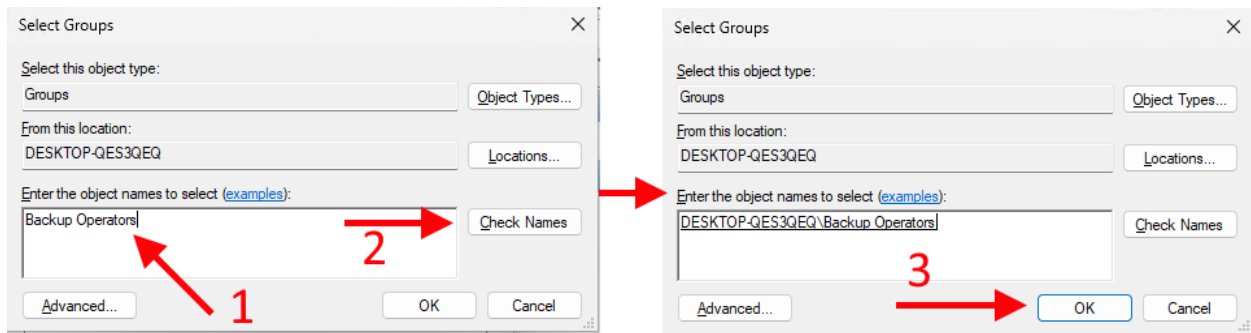

1. Select *FirstInitial_LastInitial_StandardAccess*->*More Actions*->*Properties*
2. Select the second tab, *Member Of*

3. Click *Add...* on the bottom left portion of the window
4. Enter **Backup Operators** into the *Enter object names field*, then click *Check names*.

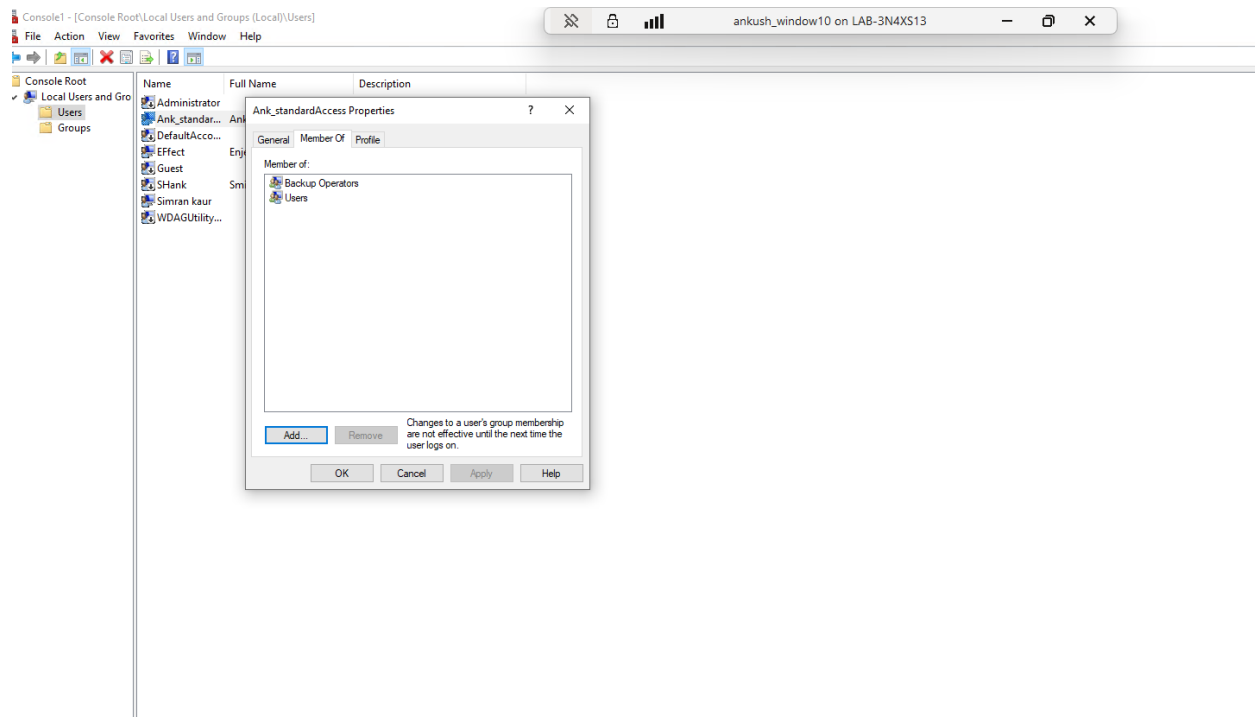

IF YOU CANNOT FIND THE GROUP, CHECK THE SPELLING AND MIND WHITE SPACES.

Then click OK.

- The user will now be added to the Backup Operators group in addition to their original Users group.

<<SS03>> Take a screenshot of the Users Member of tab, make sure to have the users name visible in the top left of the window.

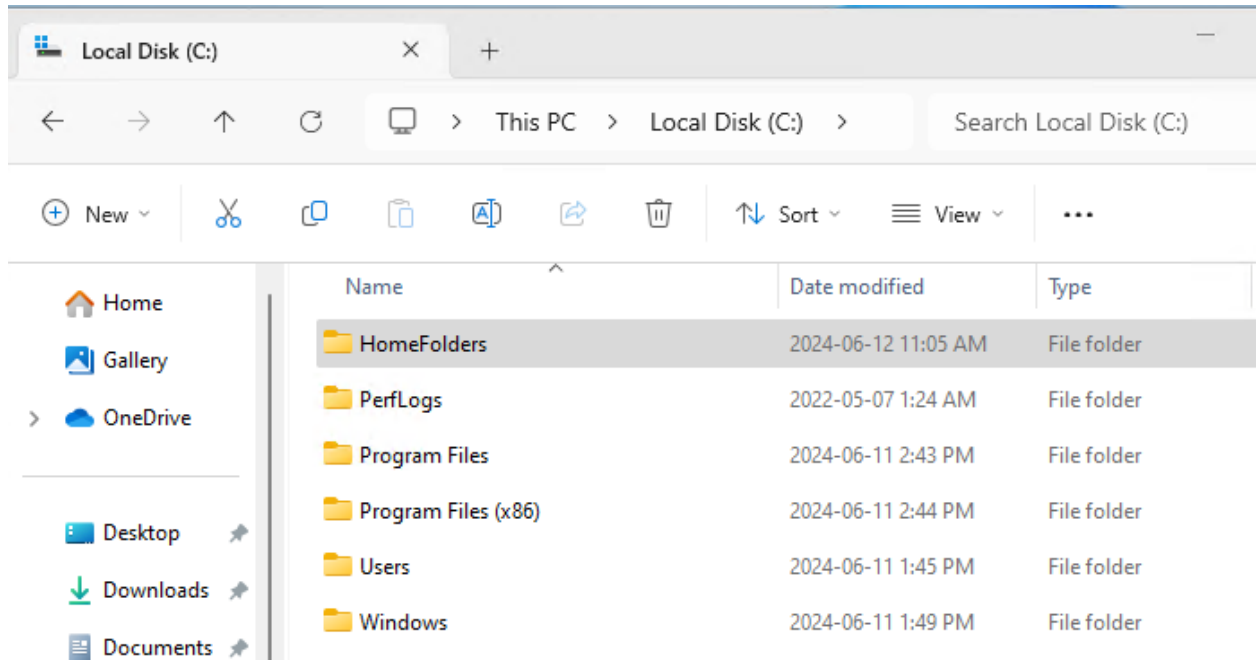

Assigning Home Folders

Home folders in Windows are the users root directory where their user information is stored, we can change the default location.

- Select *FirstInitial_LastInitial_StandardAccess*->*More Actions*->*Properties*
- Select the third tab, *Profile*.

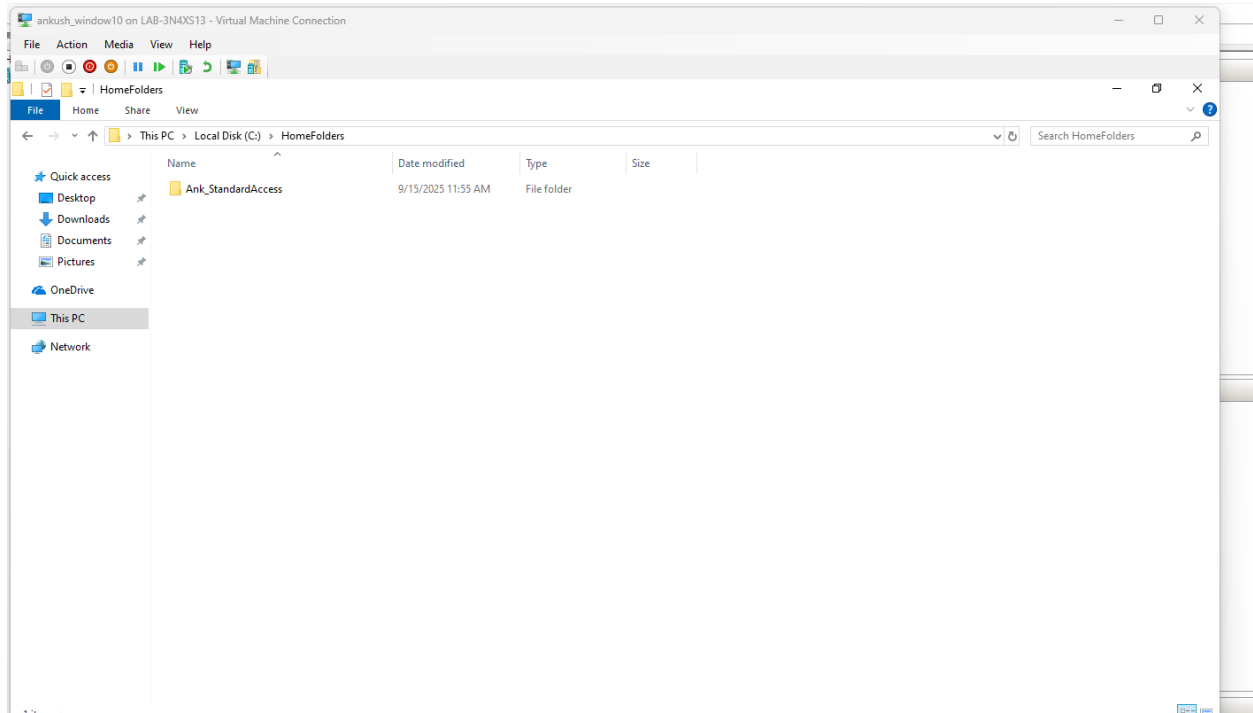

3. For Home Folder, select the local path button, and enter in the path:
C:\HomeFolders\FirstInitial_LastInitial_StandardAccess
4. Select OK.
5. Open file explorer and navigate to the C: drive, A new folder should be visible.

6. Navigate into HomeFolders, you should see a folder for your user.

<<SS04> Take a screenshot of the user folder inside the HomeFolders directory. Make sure to take a screenshot of the whole window, showing the path in the address bar as well as the

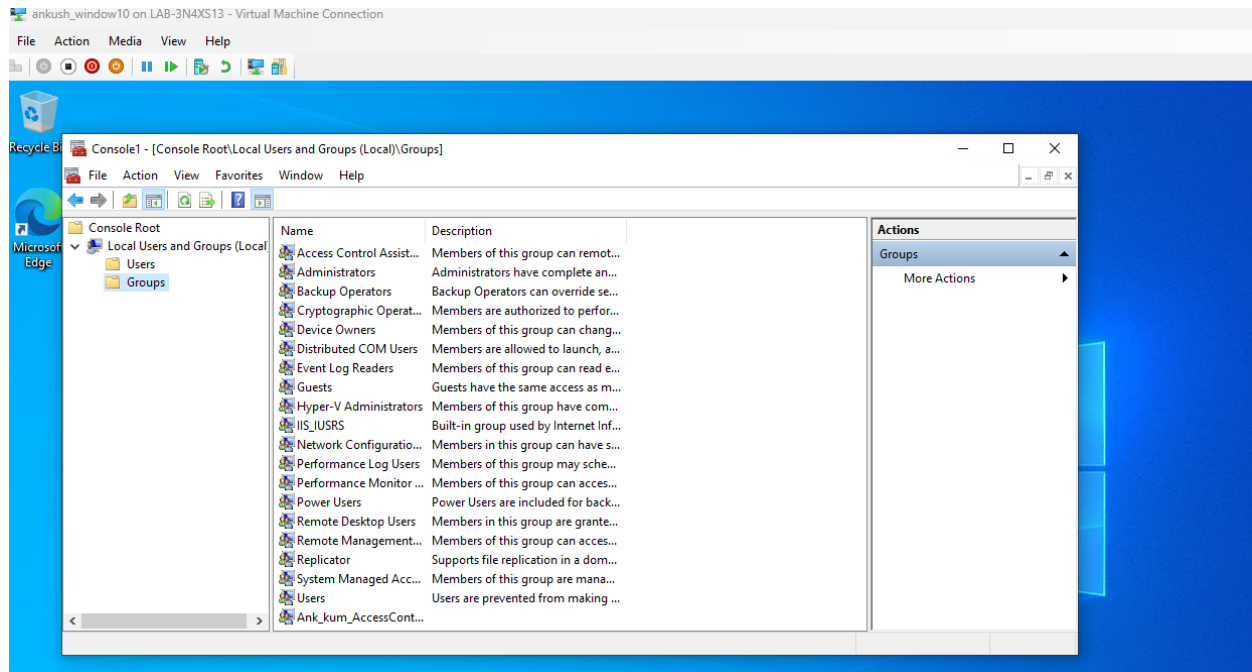

user folder.

Create Local Groups

1. In the MMC select the *Groups* folder on the left side of the window. A list of all the groups the machine has will appear in the center of the screen.
2. On the right hand side of the window select *More Actions->New Group...*
3. Create a new group with the name: ***FirstName_LastName_AccessControl***
4. Click *Create*.

<<SS05>> Take a screenshot of the MMC, showing the newly created groups Name

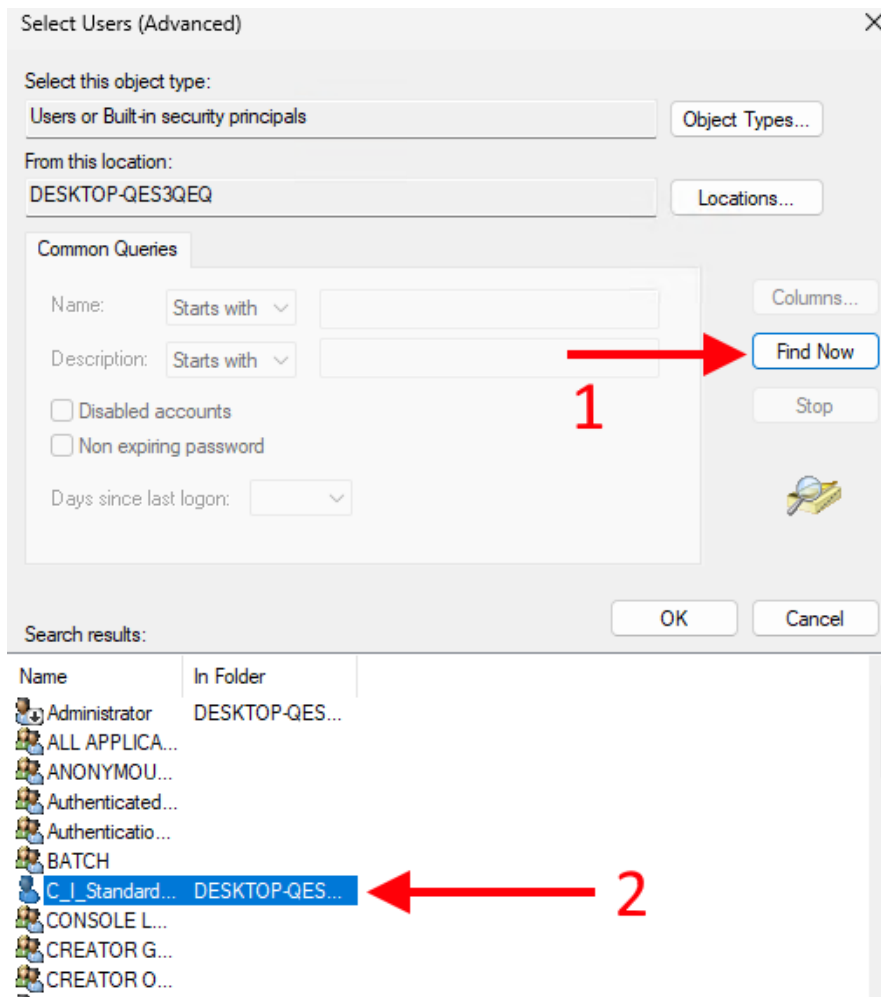

Adding accounts to groups

We can add users to groups from the user side like we did earlier, or we can add them from the group side.

1. Select *FirstName_LastName_AccessControl*->*More Actions*->*Add to Group*
2. Click *Add...* on the bottom left hand portion of the window.
3. Enter the user name you want to add. Attempt to add your **FirstInitial_LastInitial_StandardAccess** user to the group.

You can find a list of users by clicking *Advanced*.

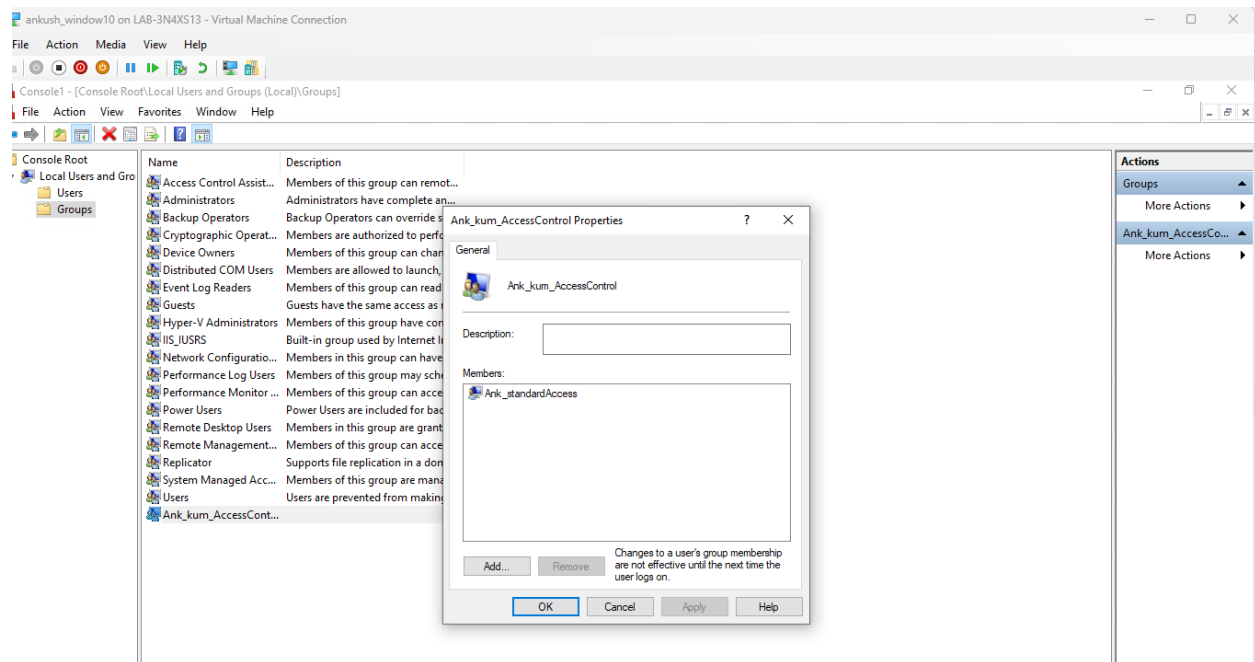

Select *Find now* to generate the list.

Double click the user to add them to the select users window.

4. Click OK.

<<SS06>> Take a screenshot of the FirstName_LastName_AccessControl properties window.
Make sure the user is visible.
